SUMMARY

Results-driven Full-Stack Web Developer with hands-on experience building scalable, production-ready web applications using React JS, Laravel, PHP, and MySQL. Demonstrated ability to architect complex systems ranging from multi-role university management platforms to gamified e-commerce solutions and payment gateways. Passionate about clean code, RESTful API design, and delivering seamless user experiences. Seeking opportunities to build impactful, real-world solutions.

PROJECTS

BoxVerse — Gamified E-Commerce Platform

React JS, Tailwind CSS, Laravel, MySQL, Zustand, Laravel Sanctum

- Engineered a gamified custom-box e-commerce platform featuring a 3-step interactive shopping journey with real-time UI feedback, reducing estimated checkout friction by 30% compared to a conventional cart flow.
- Architected 41 modular React components using a domain-driven structure with custom hooks and Zustand for global state management, eliminating prop-drilling across the entire component tree.
- Built a versioned Laravel REST API following Repository and Service patterns with Eloquent ORM, keeping controllers thin and business logic fully testable.
- Implemented token-based authentication via Laravel Sanctum with protected route guards, securing all API endpoints against unauthorized access.
- Designed a normalized MySQL schema with pivot-table relational design to support multi-product box configurations and complete order history tracking.

Jamia Umar — University Management System — [github](#)

PHP, Laravel, MySQL, Blade, bcrypt

- Built a full-stack university management system with multi-role authentication (Admin, Teacher, Parent) and BCrypt password hashing, managing records for 200+ students across separate male and female sections.
- Developed 13+ modules covering teacher and student records, attendance, salary, admissions, and finance, replacing a manual paper-based process and reducing administrative workload by an estimated 60%.
- Implemented 14 admin dashboard pages with role-based access control, ensuring each user role has access only to relevant data and permitted actions.

Banking System — Payment Gateway

PHP, Laravel, MySQL, Android WebView, Telegram Bot API

- Built a full-featured payment platform supporting real-time money transfers between users across multiple payment gateways, with a complete transaction history and audit trail for every operation.
- Developed an Android WebView application for cross-platform mobile access, extending reach to mobile users without requiring a separate native codebase.
- Integrated a Telegram Bot to handle user registration, OTP verification, and balance management, automating onboarding and reducing manual support overhead.

EDUCATION

BS Computer Science

2021 – 2025

[Government College University Faisalabad](#)

Relevant coursework: Data Structures & Algorithms, Database Management Systems, Web Engineering, Software Engineering, Object-Oriented Programming

SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), React JS, Tailwind CSS, Vite

Backend: PHP, Laravel, REST APIs, Laravel Sanctum, Eloquent ORM

Database: MySQL, Relational Schema Design, Pivot Tables, Query Optimization

State Management: Zustand, React Hooks, Context API

Tools & Platforms: Git, GitHub, XAMPP, Vercel, Netlify, Postman, VS Code

LANGUAGES

Urdu — Native | **English** — Professional
